

# Endangered Animals

By Katherine

# Amur Leopard

Amur leopards are carnivores. They are not fussy eaters, they eat many different kinds of animals, but prey mainly on roe and sika deer, hares, wild pigs and badgers. Although, when feeling brave, they have been known to eat young black bears.

# South China tiger

The South China tiger is the most endangered species of tiger and one of the 10 most endangered animals in the world, as there are thought to be less than 20 South China tigers left in the wild.

# African Wild Dog

**The wild dog is one of the world's most endangered mammals. The largest populations remain in southern Africa and the southern part of East Africa. Wild dogs are social and gather in packs of around ten individuals, but some packs number more than 40. They are predators that hunt medium-sized animals, such as gazelles. African wild dogs can reach speeds of more than 44 miles per hour.**

# Yangtze Finless Porpoise

## Facts

How many Yangtze  
Finless Porpoises are  
left in the wild?

A:1,012

Finless porpoises  
need lots of food for  
survival. The extinction  
of the Baiji dolphin  
was because of the  
food supply.

Overfishing has  
reduced their food  
supply. Pollution and  
ship movement are  
factors as well.

# Fin Whale

Some scientists think that fin whales circle schools of fish with the white side facing the prey and frightening them closer together so that they are easier to catch. The fin whale strains its food from the water through plates in its mouth.

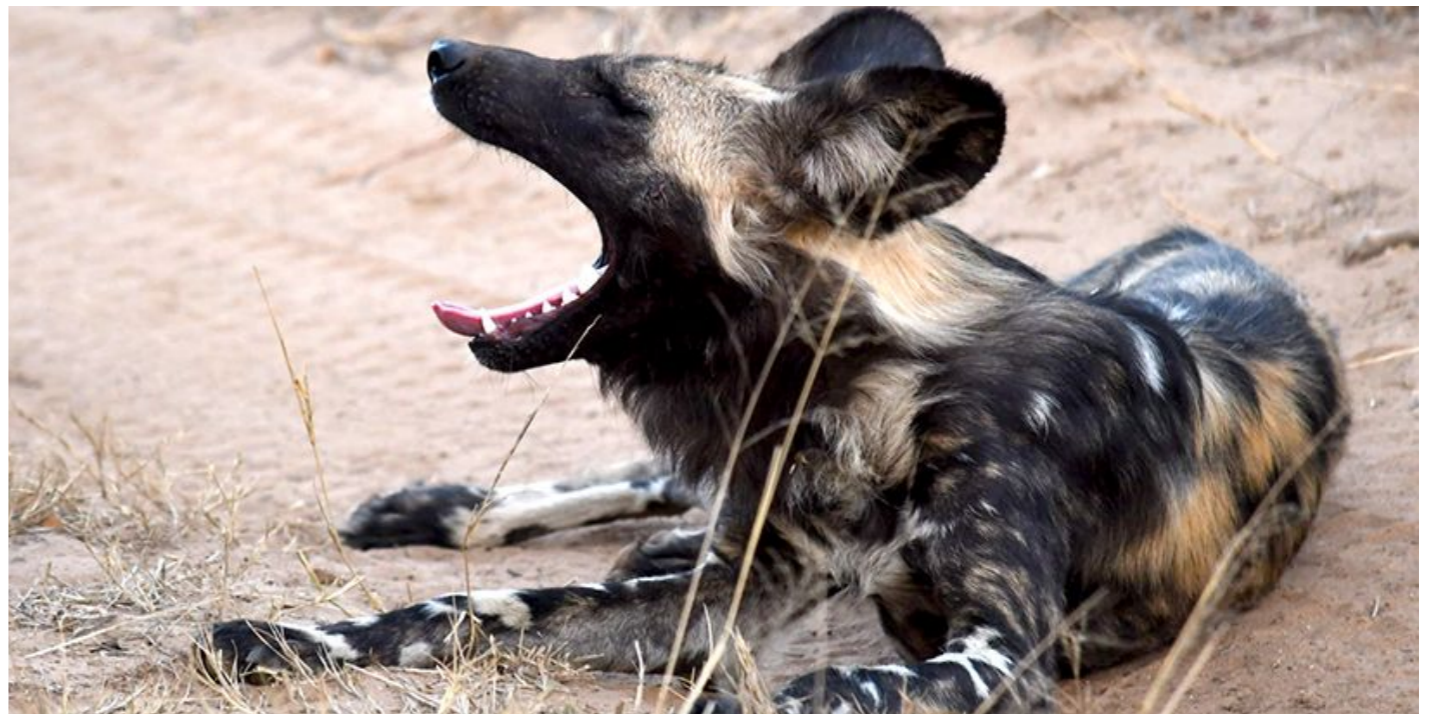

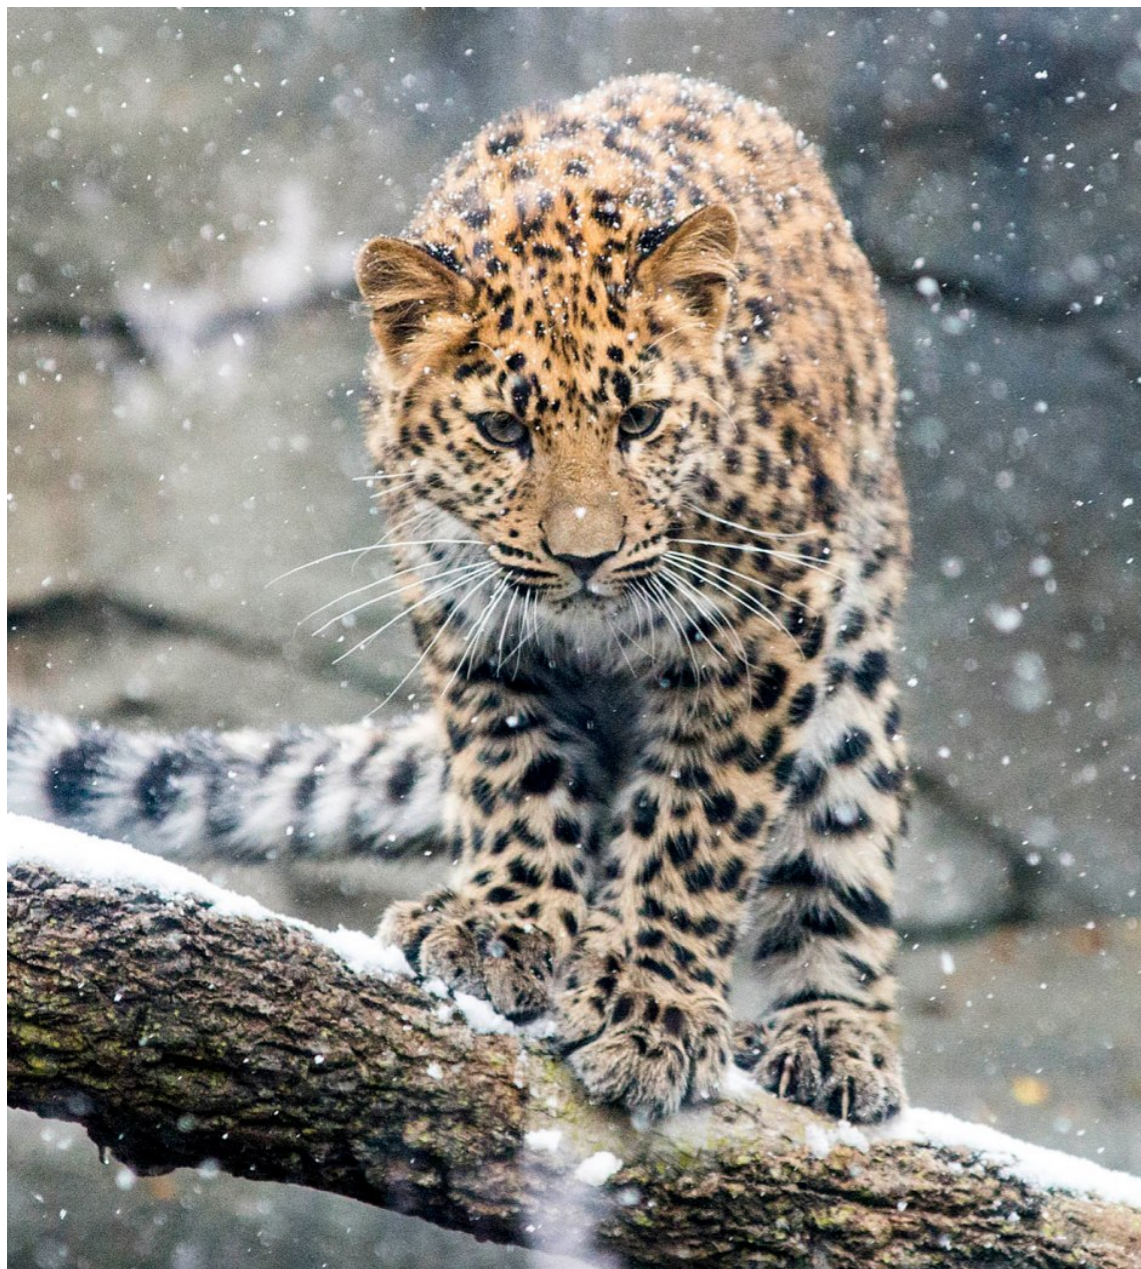

The fin whale is the second largest mammal in the world.

Facts:

How many Fin whales are left in the wild?

A:14,000~18,000

**Thank you for listening to my keynote. I hope you enjoyed it.**
